1. Welcome to GrowthZone MemberSuite

What is GrowthZone MemberSuite?

GrowthZone MemberSuite is a web-based platform that helps you move data from one system into another. Think of it as a smart assistant that takes your data files (like spreadsheets or CSV exports), lets you tell it how the columns in your file match up with the columns the destination system expects, and then does the heavy lifting of converting and transferring everything for you.

Instead of manually copying and pasting rows of data or writing complicated formulas, you use MemberSuite's visual tools to draw connections between your data and the format you need. Then you click a button and let the platform do the work.

What can you do with it?

- **Upload data files** — Bring in your CSV spreadsheets, Excel files, JSON files, XML files, or plain text files.
- **Map your fields** — Tell MemberSuite which column in your file matches which field in the target system. For example, "First Name" in your spreadsheet maps to "given_name" in the destination.
- **Run transformations** — Let MemberSuite process your data. You can do a test run first to make sure everything looks right, and then do the real thing when you are ready.
- **Track your progress** — See how many records were processed successfully and which ones need attention.

Who is it for?

MemberSuite is built for **GrowthZone customers and staff**. Whether you are a GrowthZone customer bringing your data into the platform, or a GrowthZone support

team member helping customers with their data onboarding, MemberSuite gives you a clean, organized way to manage the process from start to finish.

No technical skills required. MemberSuite was designed to be used by anyone, regardless of technical background. If you can use a web browser and work with spreadsheets, you can use MemberSuite.

2. Getting Started

Accepting Your Invitation Email

Before you can use MemberSuite, someone from your organization (or from GrowthZone) will send you an invitation by email. Here is what to do when you receive it:

1 Open the invitation email

Look for an email with the subject line containing your organization's name and an invitation to MemberSuite. Check your spam or junk folder if you don't see it in your inbox.

2 Click the invitation link

The email contains a special link that is unique to you. Click it to open the MemberSuite sign-up page in your web browser.

3 Enter your name and choose a password

On the sign-up page, fill in your **first name**, **last name**, and choose a **password**. Your password must be at least 8 characters long. Use a mix of letters, numbers, and symbols for best security.

4 Click "Create Account"

Once you submit the form, your account is created. You will see a confirmation message telling you that you can now log in.

Invitation links expire after 7 days. If your link has expired, ask the person who invited you to resend the invitation. They can do this from within MemberSuite.

Logging In for the First Time

1 Go to the MemberSuite login page

Open your web browser and navigate to the MemberSuite URL provided by your organization or GrowthZone representative.

2 Enter your email and password

Type in the email address that was used for your invitation, and the password you chose when you accepted the invitation.

3 Click "Log In"

If your email and password are correct, you will be taken to your dashboard. If you see an error message, double-check that you typed your email and password correctly. Remember that passwords are case-sensitive.

The Dashboard — What You See When You Log In

When you first log in, you will land on your **dashboard**. This is your home base. From here you can see your recent workspaces, projects, and any recent activity. Think of it as your personal starting page that gives you a quick overview of what is happening.

The Dashboard shows a personalized welcome message, onboarding status, quick stats (Total Projects, Active Plans, Recent Runs, Team Members), and your Recent Activity feed.

Navigation — The Sidebar Menu Explained

On the left side of the screen you will see the **sidebar menu**. This is how you move around the platform. Here is what each item means:

Menu Item	What It Does
Dashboard	Takes you back to your home screen with an overview of your recent activity.
Onboarding	A guided wizard that walks you through uploading your data and mapping columns. This is the easiest way to get your data into the system.
Workspaces	Shows all the workspaces you have access to. This is where your projects are organized.
Projects	Lists all projects within your organization. Each project contains data files and plans.

Chat	Chat with your GrowthZone support team and access the AI Assistant for quick help.
Activity Log	Shows a history of what has happened — uploads, runs, changes, and more.
Team	Manage team members and invitations (visible to Admins only).
Settings	Your profile and account settings.

Tip: You can collapse the sidebar by clicking the arrow icon at the top of the menu. This gives you more screen space when working with your data.

3. Understanding Your Role

Every user in MemberSuite has a **role** that determines what they can see and do. Your role was assigned when you were invited. Here is a simple breakdown of each role:

Role	What You Can Do	Who Has This Role
Platform Admin	You manage the entire system. You can see all organizations, all users, create new organizations, and manage everything across the platform.	GrowthZone internal team leads
Platform Support	You help customers with their data onboarding. You can see the organizations you are assigned to and assist their users with projects, plans, and data uploads.	GrowthZone support staff
Tenant Admin	You manage your own organization. You can invite new users to your team, manage projects, and oversee everything within your organization.	Customer organization managers
Tenant User	You work on data projects. You can upload files, create and edit plans, run transformations, and view results within your organization.	Customer team members

Tip: Not sure what role you have? Look at your profile page (click your name or avatar in the top-right corner). Your role is displayed there.

A note about "Tenant": In MemberSuite, the word "Tenant" simply means "Organization." If you are a GrowthZone customer, your company is a tenant. You do not need to worry about this term — it is just the name the system uses behind the scenes.

4. Workspaces & Projects

What Is a Workspace?

A **workspace** is like a folder on your computer. It is a way to group related projects together so you can stay organized. For example, you might have a workspace called "2026 Data Migration" that contains all the projects related to that effort.

You can switch between workspaces using the **Workspace dropdown** at the top of the sidebar. Click the dropdown to see your existing workspaces, create a new one, or edit or delete an existing workspace.

The Workspace dropdown shows your workspaces with edit and delete icons, plus a "+ New Workspace" option.

Creating a Workspace

1 Go to the Workspaces page

Click **Workspaces** in the sidebar menu.

2 Click "New Workspace"

You will see a button labeled **New Workspace** near the top of the page. Click it.

3 Enter a name and description

Give your workspace a clear, descriptive name (up to 200 characters). The description is optional but helpful for your team to understand what this workspace is for (up to 1,000 characters).

4 Click "Create"

Your new workspace is ready. You can now add projects to it.

The Create Workspace dialog asks for a Workspace Name (required) and an optional Description.

Editing a Workspace

To edit a workspace, click the **pencil icon** next to the workspace name in the dropdown. This opens the Edit Workspace dialog where you can change the name or description and click **Save**.

The Edit Workspace dialog lets you update the workspace name and description.

What Is a Project?

A **project** lives inside a workspace. It is a container for your data files and the plans that describe how to transform them. Think of it this way:

```
Workspace (folder)
|
+-- Project A (container)
|   +-- Uploaded Files (your data)
|   +-- Plans (your transformation instructions)
|   +-- Run History (results of running plans)
|
+-- Project B (container)
    +-- Uploaded Files
    +-- Plans
    +-- Run History
```

Creating a Project

1 **Open a workspace**

Navigate to the workspace where you want to create the project, or go to the **Projects** page from the sidebar.

2 **Click "New Project"**

Click the **New Project** button.

3 **Enter a name and description**

Give your project a clear name (up to 200 characters). Add an optional description (up to 1,000 characters) to help your team understand its purpose.

4 **Click "Create"**

Your project is created. You can now upload files and create plans inside it.

Sharing Workspaces with Team Members

By default, a workspace is visible only to the person who created it (the owner). To let other team members see and work in your workspace, you need to share it with them. When you share a workspace, you choose an **access level** for each person:

Access Level	What It Means
Viewer	Can see the workspace and its projects, but cannot make any changes.
Editor	Can see everything and make changes — upload files, create plans, run transformations.

Admin

Can do everything an Editor can, plus share the workspace with others and manage access.

How to Share a Workspace

1 Open the workspace you want to share

Navigate to the workspace from the Workspaces page.

2 Click the "Share" button

You will find this near the top of the workspace page.

3 Select the team member and access level

Choose the person you want to share with from the list of your organization's users. Then select the access level: **Viewer**, **Editor**, or **Admin**.

4 Click "Share"

The team member will now be able to see the workspace the next time they log in or refresh their page.

Tip: Only the workspace owner (the person who created it) and Platform-level users can share a workspace. If you need to share a workspace but do not see the Share button, ask the workspace owner to do it for you.

5. The Onboarding Wizard

The **Onboarding** wizard is the easiest way to get your data into GrowthZone MemberSuite. It walks you through a simple five-step process: Welcome, Upload Data, Map Columns, Review, and Done. You do not need to create workspaces or projects — the wizard handles everything for you.

Tip: The Onboarding wizard is available to organization users (Tenant Admins and Tenant Users). Platform Administrators and Platform Support users do not see this menu item — they configure onboarding settings through the Administration area instead.

Step 1 — Welcome

Click **Onboarding** in the sidebar menu. You will see the Welcome screen, which explains the three-step process:

1. Upload your data file (CSV format)
2. Map your columns to MemberSuite fields
3. Review and submit your mappings

Click **Get Started** to begin.

Step 2 — Upload Your Data

On this screen, you upload the data file you want to import. Drag and drop your file onto the upload area, or click to browse your computer. MemberSuite supports **CSV** and **Excel** (.xlsx, .xls) files up to **50 MB**.

Once your file is uploaded, you will see a confirmation showing the file name and the number of rows detected. A progress bar across the top tracks your position in the wizard.

Below the upload area, a **Data Preview** table shows the first rows of your file so you can verify the data looks correct before proceeding. The columns from your file (FirstName, LastName, Email, Phone, Company, Title, etc.) are displayed exactly as they appear in your file.

← Back

→ Next: Map Columns

Click **Next: Map Columns** to proceed to the mapping step.

Step 3 — Map Your Columns

This is where you tell MemberSuite how the columns in your file correspond to the fields in the system. On the left side, you see the **MemberSuite fields** (e.g., firstName, lastName, email). On the right, you select which **Source Column** from your file maps to each field.

Welcome — Upload Data — **3 Map Columns** — 4 Review — 5 Done

Last updated by Jane Smith on Jul 17, 2026 at 12:43 PM

Column Mapping

Map your columns to MemberSuite fields. 16 source columns detected.

+ Add Custom Field Auto-Map ...

MemberSuite Field	Description	Source Column	Sample Values	Transform
firstName Required	First name	Select source column	—	None (direct copy)
lastName Required	Last name	Select source column	—	None (direct copy)
email Required	Email address	Select source column	—	None (direct copy)
phone	Phone number	Select source column	—	None (direct copy)
company	Company / Organization	Select source column	—	None (direct copy)
title	Job title	Select source column	—	None (direct copy)
address1	Street address line 1	Select source column	—	None (direct copy)
address2	Street address line 2	Select source column	—	None (direct copy)
city	City	Select source column	—	None (direct copy)
state	State / Province	Select source column	—	None (direct copy)
zip	Zip / Postal code	Select source column	—	None (direct copy)
country	Country	Select source column	—	None (direct copy)

← Back 3 required unmapped Save → Next

For each MemberSuite field, click the **Select source column** dropdown and choose the matching column from your file. Fields marked **Required** (like firstName, lastName, and email) must be mapped before you can proceed.

As you map columns, the **Sample Values** column shows data from your file so you can verify the mapping is correct. You can also use the **Auto-Map** button to let MemberSuite automatically match columns that have similar names.

Column Mapping

Map your columns to MemberSuite fields. 16 source columns detected.

+ Add Custom Field Auto-Map ...

MemberSuite Field	Description	Source Column	Sample Values	Transform
firstName Required	First name	FirstName	Sarah, Michael, Patricia	None (direct copy)
lastName Required	Last name	LastName	Johnson, Chen, Ramirez	None (direct copy)
email Required	Email address	Email	sjohnson@alpinelegal.co...	None (direct copy)
phone	Phone number	Select source column	—	None (direct copy)
company	Company / Organization	Select source column	—	None (direct copy)
title	Job title	Select source column	—	None (direct copy)
address1	Street address line 1	Select source column	—	None (direct copy)
address2	Street address line 2	Select source column	—	None (direct copy)
city	City	Select source column	—	None (direct copy)
state	State / Province	Select source column	—	None (direct copy)
zip	Zip / Postal code	Select source column	—	None (direct copy)
country	Country	Select source column	—	None (direct copy)

← Back Save → Next

Tip: You do not need to map every column. Only map the fields that are relevant to your data. You can always come back and update your mappings later. Your GrowthZone representative can assist with the column mapping if needed.

When you are satisfied with your mappings, click **Save** to save your progress, or click **Next** to proceed to the Review step.

Step 4 — Review Your Mappings

Before submitting, the Review screen shows a summary of all the column mappings you configured. You will see:

- The number of column mappings configured
- The source file name and row count
- A table showing each **Source Column**, the corresponding **GrowthZone Field**, and the **Transformation** applied (typically "Direct copy")

If everything looks correct, click **Submit Mappings**. If you need to make changes, click **Back to Mapping** to return to the previous step.

Step 5 — Done

After submitting, you will see a confirmation screen with a green checkmark and the message **"Mappings Submitted."** Your GrowthZone representative will review and finalize the import.

From this screen, you can:

- **Edit Mappings** — Go back and modify your column mappings if you realize something needs to change.
- **Start Over** — Begin the entire process from scratch with a new data file.

That is all there is to it! The onboarding wizard is designed to make your initial data import as simple as possible. If you have questions about any step, your GrowthZone representative is available to help.

6. Uploading Data Files

Supported File Types

MemberSuite accepts the following types of files:

File Type	Common Extensions	Description
CSV	.csv	Comma-separated values — the most common spreadsheet export format.
Excel	.xls, .xlsx	Microsoft Excel spreadsheets.
JSON	.json	A structured data format often used by web applications.
XML	.xml	A structured data format used by many business systems.
Plain Text	.txt	Simple text files with data in a consistent format.

Maximum file size: 50 MB. If your file is larger than 50 MB, you will need to split it into smaller files before uploading. Most spreadsheet programs (like Excel or Google Sheets) can help you do this.

How to Upload a File

1 Open your project

Navigate to the project where you want to upload the file. You can find your project under its workspace or on the Projects page.

2 Go to the "Files" or "Assets" tab

Inside the project, look for the tab that shows your uploaded files.

3 Click "Upload File"

Click the upload button. A file picker window will open.

4 Select your file

Browse your computer and select the file you want to upload. Make sure it is one of the supported file types listed above and is under 50 MB.

5 Wait for the upload to finish

You will see a progress indicator while your file is being uploaded. Do not close the browser tab or navigate away until the upload is complete.

What Happens After Upload

Once your file is uploaded, MemberSuite stores it securely within your project. The file appears in your project's file list with details like its name, size, type, who uploaded it, and when. You can now use this file as the **source data** for a plan (see the next section).

Tip: Give your files clear, descriptive names before uploading them. For example, "members_export_july_2026.csv" is much more helpful than "data.csv" when you come back to your project later.

7. Working with Plans

What Is a Plan?

A **plan** is a set of instructions that tells MemberSuite how to transform your data. It is where you define which columns in your source file should go to which fields in the target system, and how the data should be converted along the way.

Think of a plan like a recipe: it describes the ingredients (your source data), the steps (the field mappings and transformations), and the result (the formatted output).

Plan Statuses Explained

Every plan has a **status** that tells you where it is in its lifecycle. Here is what each status means:

Status	What It Means	What You Can Do
Draft	You are still working on it. The plan is not finalized yet.	Edit field mappings, change settings, update the plan definition. You cannot run a draft plan.
Published	It is ready to use. The plan has been finalized and locked.	Run the plan (Dry Run or Full Run). You cannot edit a published plan. If you need to make changes, create a new plan.
Archived	It has been retired. The plan is no longer in active use.	View the plan and its past run history. You cannot run or edit an archived plan.

Plan Lifecycle:

DRAFT —————> PUBLISHED —————> ARCHIVED
(editing) (ready to run) (retired)

Creating a Plan

1 Open your project

Navigate to the project where you want to create the plan.

2 Go to the "Plans" tab

Inside the project, click on the Plans tab to see your list of plans.

3 Click "New Plan"

Click the button to create a new plan.

4 Enter a name and description

Give your plan a clear name (up to 200 characters), such as "Member Import - Phase 1". Add an optional description to explain what this plan does.

5 Click "Create"

Your plan is created in **Draft** status. You can now open it and start mapping your fields.

The Visual Mapping Interface

The mapping interface is where the real work happens. Here is the basic idea:

Source Field → Target Field

On the **left side**, you see the columns from your uploaded data file (your source data). For example: "First Name", "Last Name", "Email Address", "Phone".

On the **right side**, you see the fields that the target system expects. For example: "given_name", "family_name", "email", "phone_number".

Your job is to connect each source field to the correct target field. You do this by drawing a line from one side to the other, or by selecting from dropdown menus — depending on the interface your organization uses.

For each connection you make, you are telling MemberSuite: "Take the data from *this* column in my file and put it into *that* field in the target system."

Tip: You do not have to map every field at once. Save your work as you go. The plan stays in Draft status until you are ready to publish it, so you can come back and make changes any time.

Publishing a Plan

When you are satisfied with your field mappings and ready to run the plan, you need to **publish** it. Publishing locks the plan so it cannot be accidentally changed.

1 Open your Draft plan

Navigate to the plan you want to publish.

2 Review your field mappings

Make sure everything looks correct. Once published, you will not be able to edit the plan.

3 Click "Publish"

The plan's status changes from Draft to Published. It is now ready to run.

Important: Once a plan is published, it cannot be edited. If you discover a mistake after publishing, you will need to create a new plan with the corrections. This is by design — it ensures that every run uses a known, stable set of instructions.

Dry Run vs. Full Run

When you run a published plan, you have two options:

Run Type	What It Does	When to Use It
Dry Run	Tests your plan without making any real changes. It processes your data and shows you what <i>would</i> happen, but does not actually write anything to the target system. Think of it as a rehearsal.	Always do a Dry Run first. It helps you catch mistakes before they affect real data.
Full Run	Actually processes your data for real. It reads your source file, applies your mappings, and writes the results to the target system. This is the real thing.	Use this only after you have reviewed the results of a Dry Run and are confident everything is correct.

How to Run a Plan

1 Open a Published plan

Navigate to the plan you want to run. It must be in Published status.

2 Click "Run"

You will be asked to choose between a **Dry Run** and a **Full Run**.

3 Select your run type

Choose **Dry Run** to test, or **Full Run** to process for real. We strongly recommend doing a Dry Run first.

4 Wait for the run to complete

The run is placed in a queue and processed. You will see the status change from **Queued** to **Running** to **Completed** (or **Failed** if something went wrong). You can leave the page and come back — the run continues in the background.

Tip: Always start with a Dry Run. It costs nothing and saves you from surprises. Review the results carefully before doing a Full Run.

8. Viewing Run Results

Where to Find Run History

Every time you run a plan (whether Dry Run or Full Run), MemberSuite keeps a record of it. To view your run history:

1 **Open the project that contains your plan**

Navigate to the relevant project.

2 **Open the plan**

Click on the plan you want to review.

3 **Click on the "Runs" tab**

You will see a list of all runs for this plan, sorted with the most recent at the top. Each entry shows the run type, status, who started it, and when.

Understanding the Results

When you click on a specific run, you will see a summary of what happened. Here are the key numbers to look at:

Metric	What It Means
Records Processed	The total number of rows or records from your source file that the plan attempted to process.

Succeeded	The number of records that were successfully transformed and (for Full Runs) written to the target system.
Failed	The number of records that could not be processed. These need your attention.

Run Status Meanings

Status	What It Means
Queued	The run is waiting in line to be processed. It has not started yet.
Running	The run is currently being processed. Please wait.
Completed	The run finished successfully. Check the results to see how many records succeeded or failed.
Failed	The run encountered a serious problem and could not finish. See below for what to do.

What to Do If Records Fail

It is common for some records to fail, especially on your first run. Do not worry — here is what to do:

1. **Look at the error details.** Click on the failed run to see which records failed and why. Common reasons include missing required fields, data in the wrong format (for example, text where a number is expected), or values that are too long.
2. **Fix the source data.** Go back to your original file, correct the problem rows, and re-upload the file.
3. **Run the plan again.** Do another Dry Run to confirm the fixes, then a Full Run when you are satisfied.

Tip: If you are not sure what an error message means, check the Activity Log for more details, or contact your GrowthZone support representative for help.

9. Chat & AI Assistant

The **Chat** page gives you two ways to get help: direct conversations with your GrowthZone support team and an AI Assistant for quick answers.

The Chat page shows your conversations on the left and the selected conversation on the right. Switch between Chats and AI Assistant using the tabs at the top.

Chats

The **Chats** tab shows your conversations with the GrowthZone support team. You can:

- **Search conversations** — Use the search bar to find previous conversations.
- **Start a new conversation** — Click **+ New Conversation** to send a message to the support team.
- **View unread messages** — A red badge appears on conversations with unread messages.

Click on a conversation in the list to open it. Type your message in the text box at the bottom and press **Enter** or click **Send** to reply.

AI Assistant

The **AI Assistant** tab lets you ask questions and get instant answers about using MemberSuite, data formatting, mapping fields, and more. It is available around the clock and can help you troubleshoot common issues without waiting for a support representative.

Tip: Use the AI Assistant for quick questions like "What file formats are supported?" or "How do I map a date field?" For complex issues or account-specific questions, start a chat with the support team.

10. Inviting Team Members

If you are a **Tenant Admin**, **Platform Admin**, or **Platform Support** user, you can invite new people to join your organization on MemberSuite.

How to Send an Invitation

1 Go to the Team page

Click **Team** in the sidebar menu.

2 Click "Invite User"

You will see a button to invite a new team member.

3 Enter their email address

Type the email address of the person you want to invite.

4 Choose their role

Select the appropriate role for this person. If you are a Tenant Admin, you can assign either **Tenant Admin** or **Tenant User**. See the [Understanding Your Role](#) section above for descriptions of each role.

5 Click "Send Invitation"

An email is sent to the person with a link to create their account. The invitation is valid for **7 days**.

Choosing the Right Role

Quick guide:

- Choose "Tenant Admin"** if this person needs to manage the team — invite others, oversee projects, and have full control over your organization's MemberSuite account.
- Choose "Tenant User"** if this person will be working with data — uploading files, creating plans, and running transformations, but does not need to manage the team or invite others.

Managing Invitations

On the Team page, you can see a list of all pending, accepted, and cancelled invitations. From here you can:

Action	What It Does	When to Use It
Resend	Sends a fresh invitation email with a new link and resets the 7-day expiration timer.	If the person did not receive the original email, or if the original link expired.
Cancel	Cancels the invitation. The link in the email will no longer work.	If you invited the wrong person or no longer need them to join.

You cannot invite someone who already has an account. If the email address is already registered in MemberSuite, the system will let you know. If that person needs to be in a different organization, contact a Platform Administrator.

What the Invited Person Sees

When someone receives your invitation, they get an email that includes your name, your organization's name, and a link to accept the invitation. When they click the link, they are taken to a page where they enter their first name, last name, and choose a password. Once they complete that, they can log in immediately.

11. Password & Account

Changing Your Password

1 Click your name or avatar in the top-right corner

A dropdown menu will appear.

2 Click "Settings" or "Profile"

This takes you to your account settings page.

3 Find the "Change Password" section

Enter your current password, then type your new password twice to confirm it.

4 Click "Save" or "Update Password"

Your password is updated. Use the new password the next time you log in.

Password requirements: Your password must be at least **8 characters** long and no more than 128 characters. We recommend using a mix of uppercase letters, lowercase letters, numbers, and special characters.

Forgot Password — How to Recover

If you forget your password, you can reset it without contacting anyone:

1 Go to the login page

Open MemberSuite in your web browser.

2 Click "Forgot Password?"

You will find this link below the login form.

3 Enter your email address

Type the email address you use to log in to MemberSuite. Click "Send Reset Link."

4 Check your email

You will receive an email with a password reset link. Click it to open the reset page. Check your spam or junk folder if you do not see the email within a few minutes.

5 Enter your new password

Type your new password (at least 8 characters) and confirm it. Click "Reset Password."

6 Log in with your new password

Go back to the login page and sign in using your email and new password.

Password reset links expire after 1 hour. If your link has expired, go back to the login page and request a new one.

Your Profile Settings

On your profile page, you can view and update your personal information:

- **First Name and Last Name** — How your name appears throughout the platform.
- **Email Address** — The email you use to log in. This cannot be changed by you; contact a Platform Administrator if you need to change it.
- **Role** — Your assigned role (view only). Contact your administrator if you need a different role.
- **Avatar** — Your profile picture, if one has been set.

12. For Platform Administrators

If you are a **Platform Admin** or **Platform Support** user, you have access to a full set of administration tools for managing organizations, users, invitations, platform branding, onboarding schemas, activity logs, and more.

These features are covered in detail in the dedicated [Platform Administrator Guide](#), which includes step-by-step instructions and screenshots for every administration task.

Quick summary of what Platform Administrators can do:

- **Organizations** — Create, edit, activate/deactivate customer organizations and optionally invite an admin owner during creation.
- **Users** — View, create, edit, and activate/deactivate users across all organizations. Filter by organization, role, or status.
- **Invitations** — Send, resend, and cancel invitation emails platform-wide. Track invitation status (Pending, Accepted, Cancelled, Expired).
- **Platform Branding** — Set the platform-wide brand name and logo that appears on the login page and sidebar for all users.
- **Onboarding Schema** — Configure the data collection fields for each organization's onboarding process.
- **Theme Customization** — Customize UI colors, sidebar background, and border radius per organization.
- **Activity Log** — View a read-only audit trail of all actions performed across the platform.

Tip: For the complete guide with detailed procedures and screenshots, open the [Platform Administrator Guide](#).

13. Getting Help

Contact Your GrowthZone Support Representative

If you run into a problem you cannot solve on your own, reach out to your GrowthZone support representative. They have access to your organization's data and can help troubleshoot issues, answer questions, and guide you through any part of the platform.

Check the Activity Log

If something unexpected happened — data that looks wrong, a missing file, or a setting that changed — the Activity Log is the first place to look. It shows who did what and when, so you can quickly understand what happened.

Common Questions and Answers

Question	Answer
I did not receive my invitation email. What should I do?	Check your spam or junk folder first. If it is not there, ask the person who invited you to resend the invitation from the Team page.
My invitation link says it is expired. What now?	Invitation links are valid for 7 days. Ask the person who invited you to click "Resend" on your invitation. This creates a fresh link with a new 7-day window.
I forgot my password. How do I get back in?	Go to the login page and click "Forgot Password?" Enter your email address and follow the instructions in the email you receive. The reset link is valid for 1 hour.
My file upload failed. What went wrong?	The most common reasons are: the file is too large (over 50 MB), the file type is not supported, or the

file is empty. Check the file and try again. If the problem continues, contact support.

I published my plan but found a mistake. Can I undo it?

Published plans cannot be edited. Create a new plan with the corrections, map your fields again, and publish the new plan. You can archive the old plan to keep things tidy.

What is the difference between a Dry Run and a Full Run?

A Dry Run is a test — it shows you what would happen without actually changing anything. A Full Run does the real processing. Always do a Dry Run first.

Can I delete a project or workspace?

Yes, if you are the owner of the project or have the appropriate permissions. Be careful — deleting a project removes all of its files, plans, and run history.

I cannot see a workspace that my colleague shared with me.

Try refreshing your browser. If you still cannot see it, ask your colleague to confirm they shared it with the correct email address and that your access level is set correctly.

What happens to my data when an organization is deactivated?

Your data is preserved but not accessible. No one in the organization can log in while it is deactivated. If the organization is reactivated, everything will be available again as before.

14. Glossary

Here are simple definitions for terms you will encounter while using GrowthZone MemberSuite:

Term	What It Means
Tenant	An organization that uses MemberSuite. If you are a GrowthZone customer, your company is a tenant. Each tenant has its own users, workspaces, projects, and data — completely separate from other tenants.
Workspace	A folder-like container used to group related projects together. You can share workspaces with team members and control who can view or edit them.
Project	A container that holds your uploaded data files, transformation plans, and run history. Projects live inside workspaces.
Plan	A set of instructions that tells MemberSuite how to transform your data — specifically, which fields in your source file map to which fields in the target system. Plans go through three stages: Draft, Published, and Archived.
Plan Run	A single execution of a plan. Every time you run a plan, a Plan Run record is created that tracks the status and results.
Dry Run	A test run that shows you what would happen if you ran your plan for real, without actually making any changes. Use this to verify your plan is correct before doing a Full Run.
Full Run	A real run that actually processes your data and writes the results to the target system. Only do this after reviewing the results of a Dry Run.
Asset	A file that has been uploaded to a project. This could be a CSV, Excel, JSON, XML, or text file. Also called a "data file" or "uploaded file" in this guide.

Role	Your permission level in MemberSuite. There are four roles: Platform Admin, Platform Support, Tenant Admin, and Tenant User. Your role determines what you can see and do.
Invitation	An email sent to someone asking them to join MemberSuite. The email contains a special link that lets them create their account. Invitations are valid for 7 days.
Field Mapping	The connection between a column in your source file and a field in the target system. For example, mapping your "Email Address" column to the target system's "email" field.
Source Field	A column or field in your uploaded data file. This is where the data comes from.
Target Field	A field in the destination system. This is where the data will go.

You are ready to go! This guide covers everything you need to get started with GrowthZone MemberSuite. Remember: start with a workspace, create a project, upload your data, build a plan, test with a Dry Run, and then do a Full Run when everything looks right. If you ever get stuck, your GrowthZone support representative is just a message away.
